

## SIMPLA HAMMER

In 2016 I started cooperation with the company Simpla - Factory of bicycle parts and accessories. I am doubly satisfied with this cooperation because it is a Polish company, and secondly producing parts in my hometown, Nysa. Of course, besides the necessary support that enabled me to take part this season, I also use products, more specifically mudguards. At the moment, my good companion during the unfavorable aura is the training mudguard Hammer. I decided on a slightly larger set, which visually differs a bit from the latest trends and works perfectly on rainy days, and the ride does not end with the rider being completely wet. The front mudguard is fixed in a simple and classic way by inserting it into a wide handle screwed to the steering tube. The rear mudguard is fixed to the post. Thanks to the adjustable strap, it can be adjusted underneath. The advantage of the mudguards is the material used for the production is so rigid that it retains the shape while maintaining optimum flexibility which minimizes the possibility of fracture. I recommend Hammer from Simpla for all tireless riders who still prefer to spend their training outdoors.
